Today 56 newspapers in 45 countries take the unprecedented step of speaking with one voice through a common editorial. We do so because humanity faces a profound emergency.

Unless we combine to take decisive action, climate change will ravage our planet, and with it our prosperity and security. The

phere - three-quarters of all carbon dioxide emitted since 1850. It must now take a lead, and every developed country must commit to deep cuts which will reduce their emissions within a decade to very substantially less than their 1990 level.

Developing countries can point out they did not cause the bulk of the problem, and also that the poorest regions of the world will be hardest hit. But they will increasingly contribute to warming, and must thus pledge meaningful and quantifiable

How tall are these (to tip)?

Most common response: 50-80m, but they are...

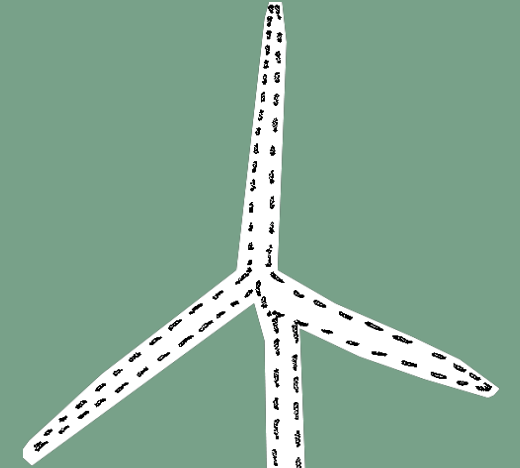

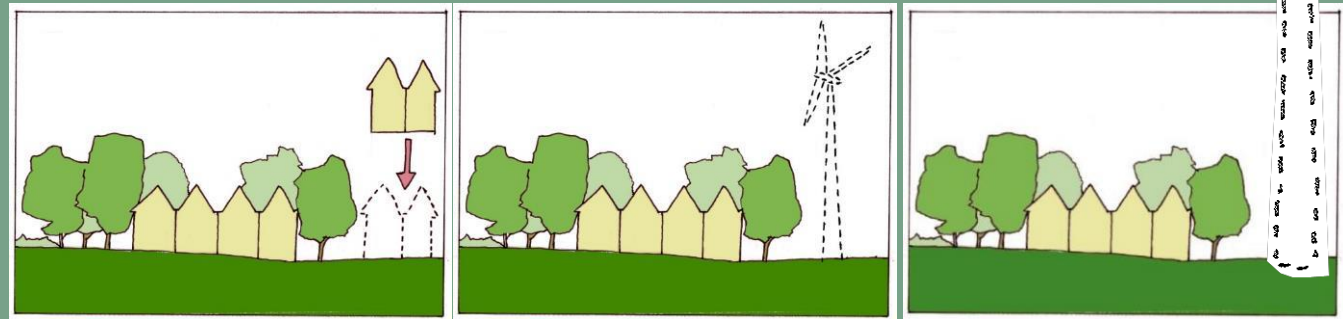

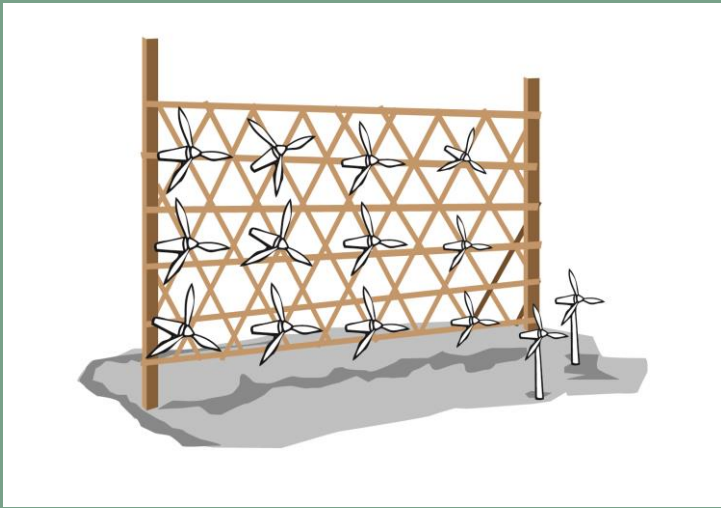

135 hub, 126 Rotor, 198m Tip

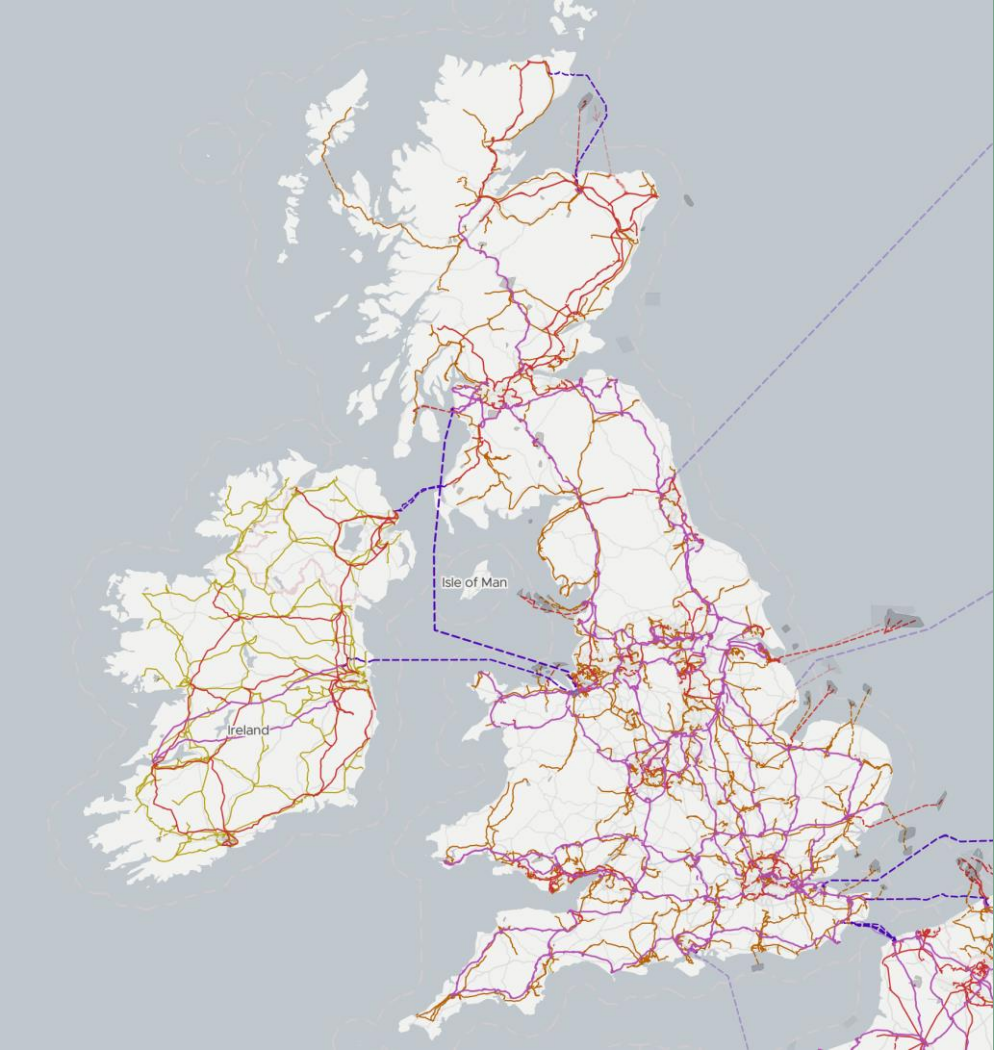

198m

61m Tip

The Landscape Architect's adagio: 'fitting in' is now failing us,

A strategic framework, integrated thinking &
squeezing every MW.

“Go tall, Go big, because we have so much more to do”

Use our collective knowledge gained over many years

Acknowledge smaller contributions (re-power etc) and harvest ‘low hanging fruit’

Develop the GRID

Tell people the way it is

Develop a cohesive strategy with short and long term horizons

Challenge and say the unthinkable
