

Book your place on the Aberdeen Heat and Power guided tour of Seaton

21 May 2009

One of the best examples of new district heating with CHP in buildings is the Seaton area project in Aberdeen a few miles away from the AECC. Electric heating in social housing was replaced by district heating with CHP.

In liaison with Aberdeen Heat and Power and the Danish district heating association, CHPA is organising a guided tour of Seaton on **21 May 2009**. The afternoon tour, linked to the nearby Aberdeen All-Energy Exhibition, is free to attend and will consist of a visit to the Energy Centre, presentations on how the scheme was created and paid for, plus a chance to meet tenants.

For those attending the Exhibition, there is an opportunity to hear how district heating schemes (including waste to energy) are developed in Denmark and elsewhere. Danish DH businesses are very interested in investing in DH the UK.

This is how the Government recently described the Aberdeen Heat and Power Seaton Project:

“There are a number of examples of successful district heating schemes...for example, Aberdeen City Council. Between October 2000 and December 2003, Aberdeen installed a CHP district heating system into multi-storey block of flats in the Seaton area of the city. 288 flats have benefited from 40% cuts in their fuel bills and an estimated CO2 reduction of 936 tonnes per year. The cost of the scheme came to approximately £1.5 million”.

From the Community Energy Saving Programme (CESP) Consultation Document para 4.41.
